

Postdoctoral position in structural biology at Fundación Biofísica Bizkaia

A postdoctoral position in structural biology funded by the Fundación Biofísica Bizkaia (FBB) is available immediately in the laboratory of Dr. Iban Ubarretxena (<https://www.ikerbasque.net/es/iban-ubarretxena-belandia>) at Instituto Biofísica (www.biofisika.org), a joint research centre of the University of the Basque Country (UPV/EHU) and the Spanish National Research Council (CSIC) at Bilbao (Spain).

We employ biochemical approaches combined with electron cryomicroscopy (cryoEM) to study proteins relevant to human biology and disease. The laboratory is well equipped for all aspects of molecular biology, biochemistry and biophysics needed for structural biology and has access to local and international cryoEM facilities.

Candidates must hold a Ph.D. in Molecular Biology, Chemistry, Biochemistry, Biophysics, Structural Biology or an appropriately related field. A strong research experience in cryoEM is a requisite. In addition, the candidate must have strong interpersonal, organizational and communication skills.

We encourage women candidates to apply. Please submit through the Biofísica website contact page (<http://biofisika.org/contact/>) adding the following subject: [Job Application: 50Ibarretxena], a cover letter, curriculum vitae, and contact information for three professional referees.

The deadline to receive applications is August 25th, 2019 at 17:00 h CET.

Please note that due to the large number of applicants expected, it will not be possible to communicate the evaluation results to all the candidates.
